Ubiatarplay
WIN-WIN
commitment

THE UBIATARPLAY WIN-WIN COMMITMENT

Many people are concerned about the **potential loss** of **value of coins** bought during ICOs; it could happen, when a new token is traded by exchanges and the initial volumes are inevitably small.

A loss of value of all cryptocurrencies can also happen and normally produces a fall in prices of all tokens.

To **avoid losses** due to these and other external factors, we offer the **UbiatarPlay WIN-WIN commitment**.

**With the Ubiatarplay
WIN-WIN commitment
the token buyers
cannot lose.**

UbiatarPlay commits itself to **buy back** the ubiatarcoins needed for its **weekly business operations** at the **same price of the ICO** (2 US dollars) from all those that have them and register into the **SellersList**.

If the ubiatarcoins needed are **only available on the exchanges** for any **price higher** than the one of the ICO, they will be bought there, while any **quotation lower** than that will result in the **buying from the SellersList**.

The effect of his mechanism is that anybody holding ubiatarcoins (like ICO subscribers) will have the option to **sell them on the exchanges** or for **at least the same price of the ICO** (2 US dollars). This is called a **WIN-WIN situation**, since it is impossible to lose.

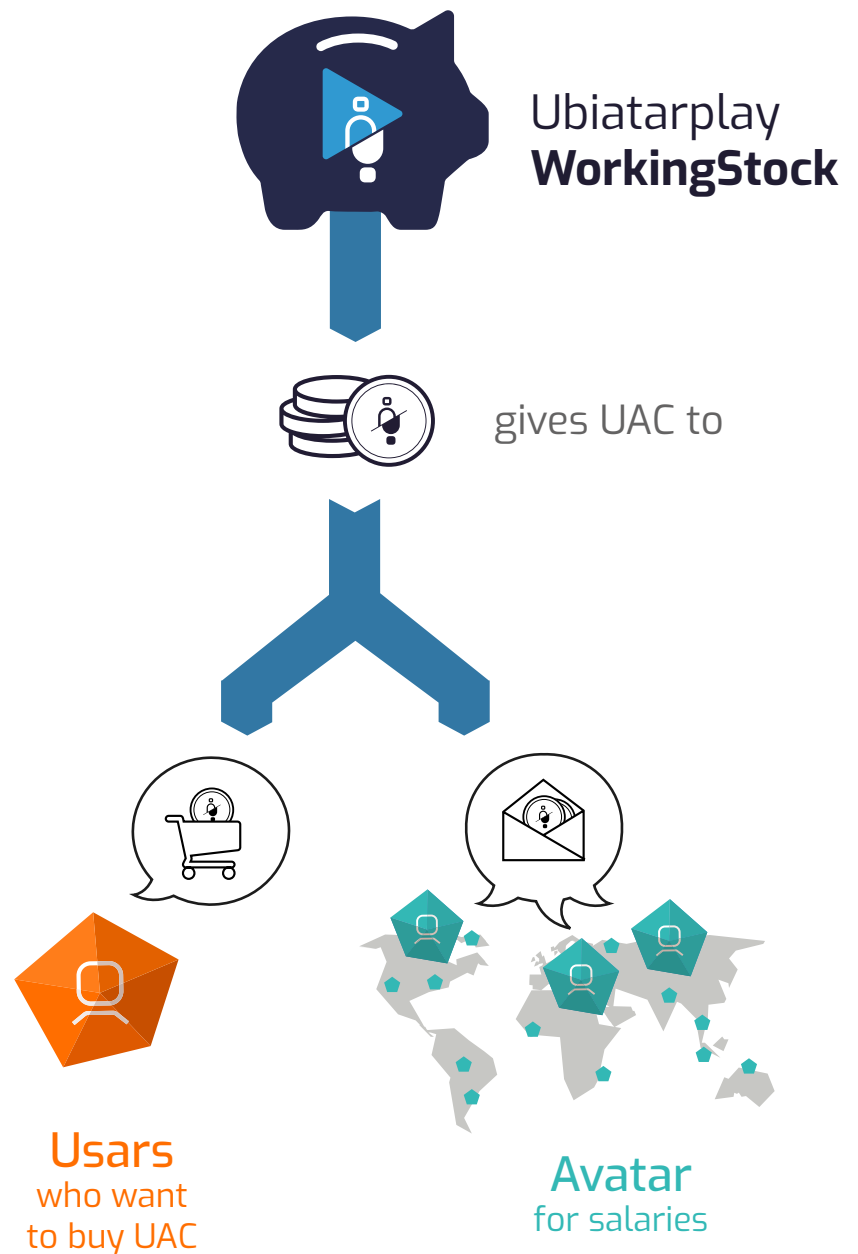

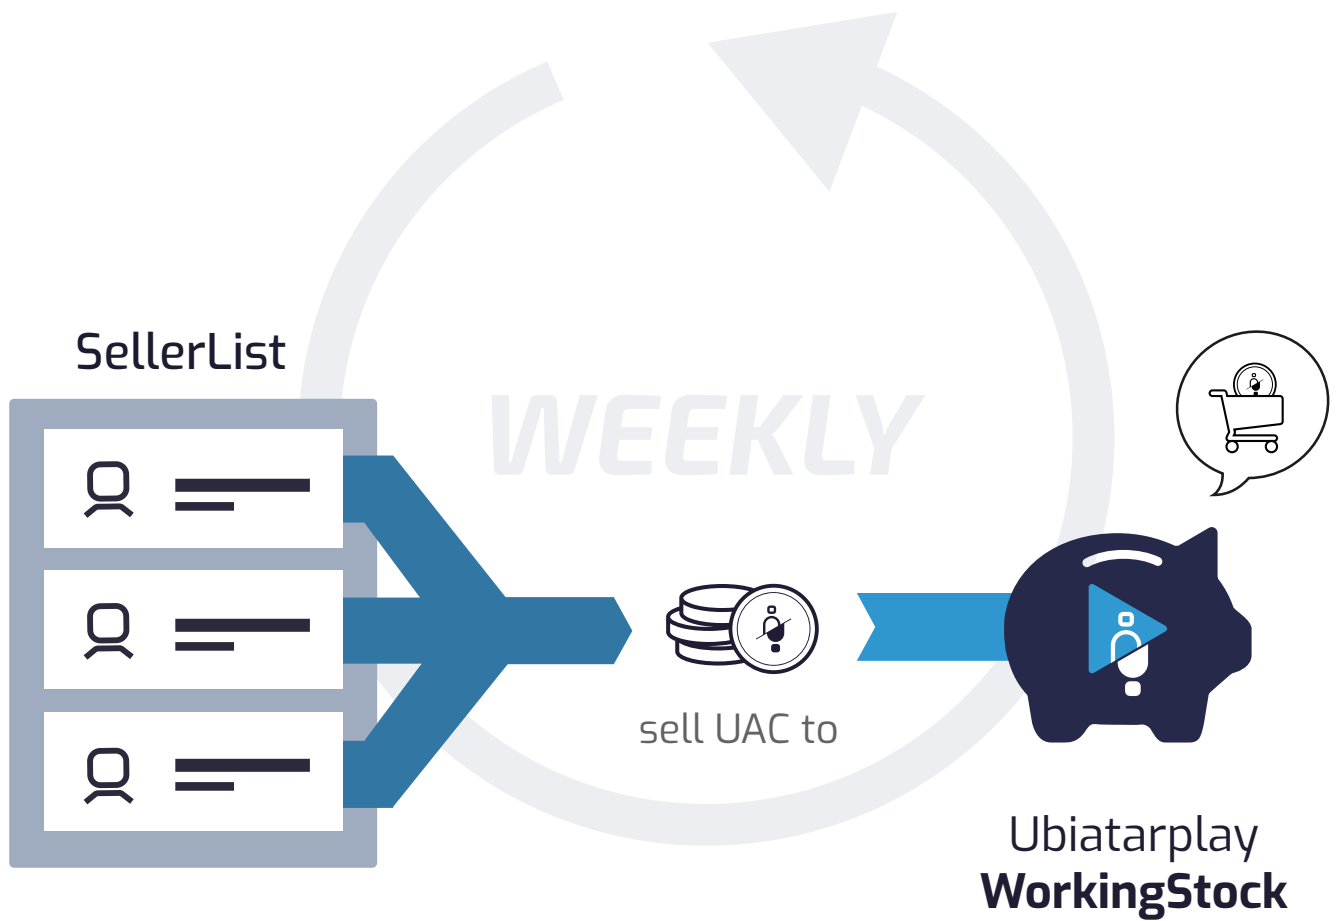

UAC LIFE CYCLE

*Ubiatarplay has its own stock of UAC, called **WorkingStock**.*

*Some of these UAC are sold to the **Usars** who want to buy **UAC** with credit card (because they still don't have acces to exchanges) to use Ubiatar.*

*Another part goes to the **Avatars** who take part to the **UbiatarPlay Live Broadcast Worldwide** project as **salary**.*

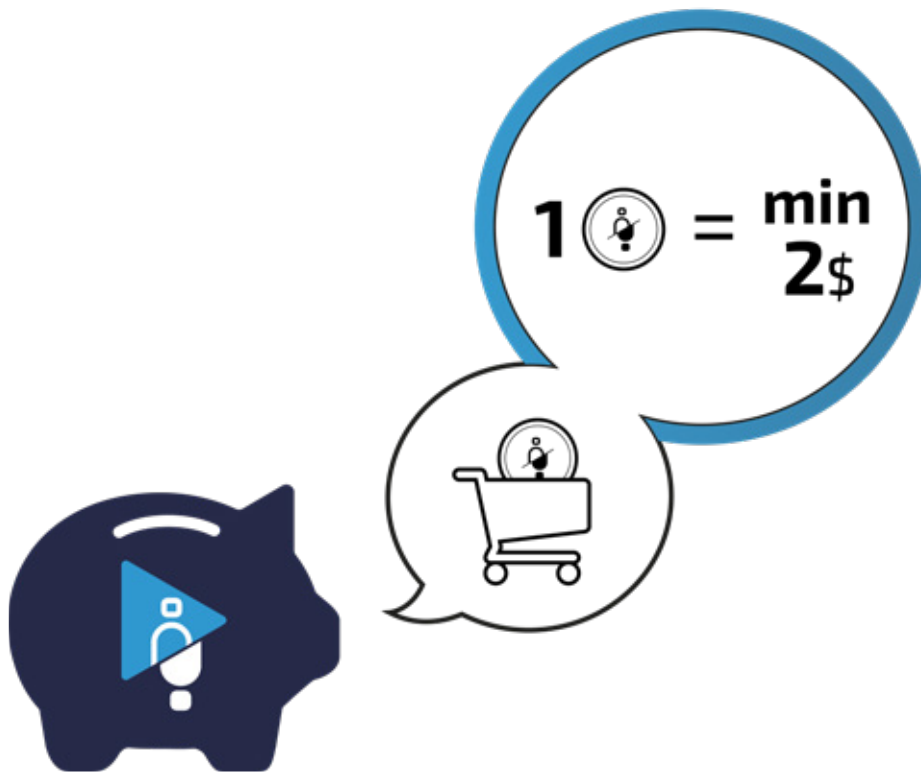

The **WorkingStock** has a minimum level of **200'000 UAC**. To remain to minimum level it will need to be **replenished every week**. Ubiatarplay will replenish it by **buying UAC** from the **SellerList**.

The tokens are bought in **equal parts from all the sellers** in the SellerList. We will not prioritize **bigger sellers**.

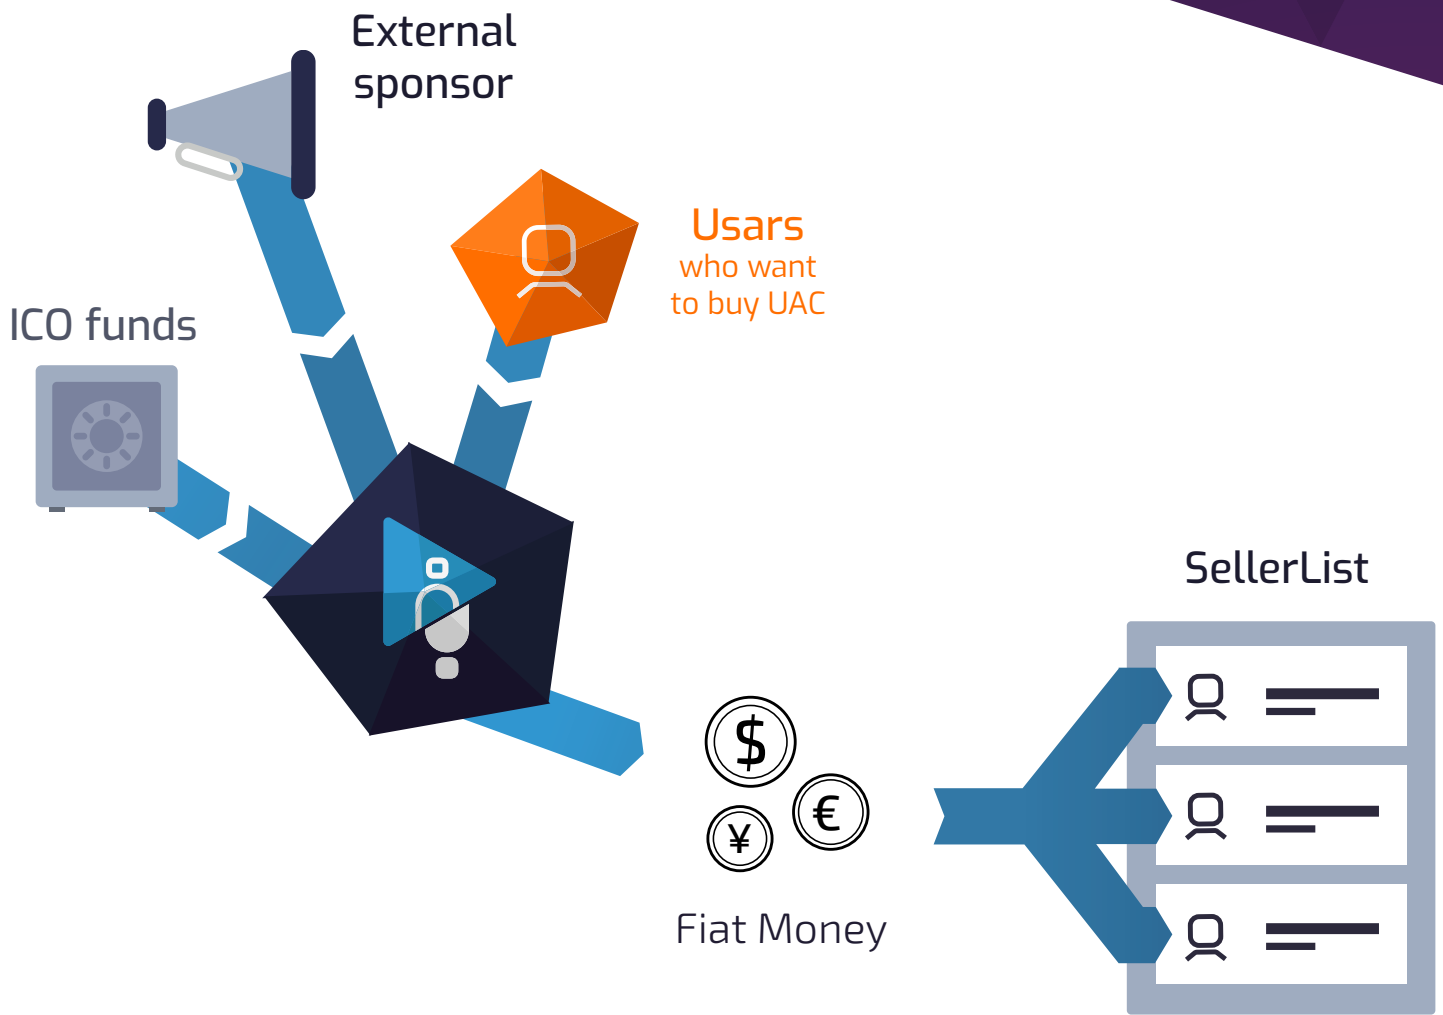

To be a seller it is required to complete a **KYC procedure**.

Ubiatarplay
WorkingStock

*Ubiatarplay commits to **buy** UACs from Seller list at least at **2,00\$ (ICO price)**.*

WIN-WIN:
Selling price never goes
below ICO level

The **sellers** in the SellerList are **paid** by UbiatarPlay **with fiat money** that comes from the **ICO funds**, **external sponsors** who buy advertising spaces on the broadcasts and **usars who want to buy UAC** with credit cards.
